

# SoBoDASH

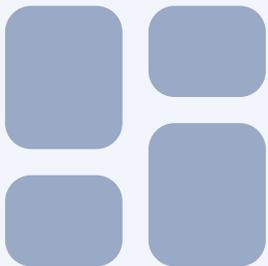

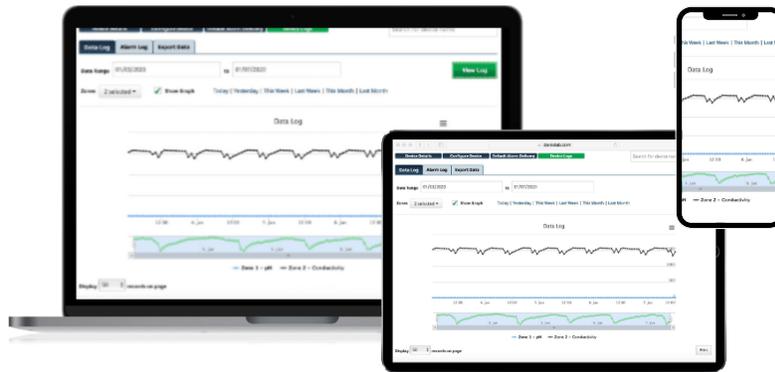

## Lab Animal Management Database App

- Designed for digitizing and managing your lab's animal colonies & environmental parameters

### Let us help you accelerate your research

Designed for researchers, managers, technicians, and others to manage, analyze, and access their colony data as needed. Individuals can document tank & rack systems, record and observe water quality parameters, manage breeding schedules, and more

### Features

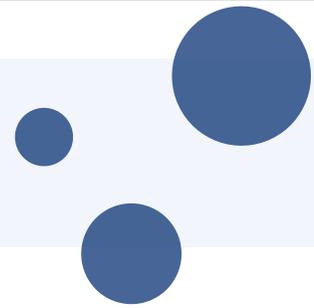

- Digitize, document, track, monitor, and control your fish and water quality data across devices
- Scanning and labeling capabilities
- Customizable notification settings
- User-friendly, intuitive interface

Participants in our Beta Testing Program will receive up to 2 years of premium service for free when our finalized application becomes available.

# Beta Testing Program - Sign up today

## How It Works

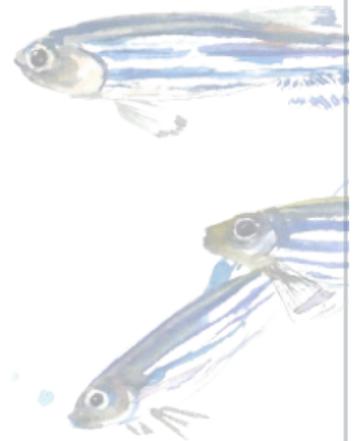

### SoBoDASH: 6-Month Trial

#### Initial Setup

- 1.) Contact us to sign up (hello@sobolifescience.com)
- 2.) Rory will give you a personal demo (via Zoom) to help set you up with everything
- 3.) We'll send you a spreadsheet, where you will enter in all the data you would like to be in the system
- 4.) We will review your data, get back to you with any questions, and then import that into your database
- 5.) Login info will be provided for customized app - then you can access your database on your own on any device and begin using it!

#### Post Setup | Check-In Meetings

Throughout each week, you can gather and jot down any and all potential questions, concerns, issues. Feel free to take any screen shots - whatever is easiest on your end to show any technical problems.

Check-ins with Ryan - each week or so, we can have scheduled check-in meetings (via Zoom) to address all questions which can turn into monthly meetings, as system bugs/problems dissipate).

#### For scanning and labeling, we recommend these sticker sheets:

SheetLabels - SL556 (2" x 1"), 40 UP, XL Vinyl Laser
